

Wind Turbine Climber Kit - international

WK16

Off the shelf climbers kit for wind turbine technicians featuring Tensor Pro twin lanyard

The WTG Climber Pro kit contains high specification equipment specifically designed for the wind industry.

At the heart of the work kit is the VORTEX WTG full body harness with integrated work positioning belt.

The rear attachment point is designed and positioned at nape of neck to eliminate discomfort when climbing WTG interior ladders. This ensures more vertical orientation of casualty when being lowered during rescue and minimises interference with ladder rungs.

The Pro kit also includes our new ELITE lanyard - specifically designed to minimise the consequences of a fall that side loads the connectors.

This climbing kit contains everything needed to climb and work in the wind industry (except for the vertical fall arrest traveller which is specific to each WTG).

Kit includes:

- VORTEX WTG Full Body Harness
- DUON Climbers Helmet (EN12492)
- ELITE Twin Lanyards (60mm opening, 16kN cross gate strength).
- PIRANHA Rope Adjuster
- Sling, Nylon, Protected, 60cm
- Head Torch
- KARI Kit Bag 30L 18kg WLL
